ABOUT

C++ developer with over 5 years of professional experience, specializing in high-throughput services and distributed systems. I have worked in teams of 3 to 32 people, both remotely and on-site, and have been involved in the full software development lifecycle – from gathering requirements from product owners to setting up automated release processes with high test coverage, strong observability, and reliable CI/CD pipelines. I have hands-on experience with C++11 through C++23, as well as databases, DevOps practices, and ML/AI model inference.

Outside of work, I enjoy solving complex algorithmic problems and have been teaching algorithms to students for over 1.5 years. I am also passionate about game development and have created my own Minecraft-like game using OpenGL.

SKILLS

C++11/14/17/20/23, STL, concurrency, lock-free structures, zero-copy, cache-friendly code, Boost, Valgrind, GDB, system design, distributed systems, high-load systems, microservices, Userver, GoogleTest, HTTP/TCP, REST API, gRPC, Protobuf, WebSocket, PostgreSQL, SQL, Redis, Apache Kafka, S3, Linux, Docker, Kubernetes, CMake, CI/CD, GitLab, Prometheus, Grafana, Vault, OpenSSL, Intel SGX, Python, OpenCV, OpenGL, TensorFlow, Agile, Scrum.

EXPERIENCE

UNICREDIT 02/2024 - PRESENT, 2+ YEARS

- Designed and led development of a service suite for **Private Set Intersection**, reducing manual effort by **91.3%**.
- Reduced processing time by **43.6%** by adopting concurrent processing techniques.
- Created a reliable cryptographic algorithm that **prevented** sensitive-data leakage.
- Developed a system that improved advertising efficiency by **17.5%**.
- Conducted technical interviews.

Technologies: C++20/23, concurrency, Userver, OpenSSL, pytest, PostgreSQL, Nextcloud, CMake, Kubernetes, HTTP/TCP, REST API, GitLab CI, Grafana, Vault.

ALPACA 08/2022 - 02/2024, 1.5 YEARS

- Designed and developed a service for collecting, normalizing, and storing bond market data from multiple external sources.
- Implemented asynchronous cache preloading and background data refresh, reducing average request processing time by **33.2%**.
- Improved system reliability by extracting the functionality into a separate service, increasing test coverage by **13.5** percentage points.

Technologies: C++17/20, STL, concurrency, Boost.Asio, REST API, WebSockets, PostgreSQL, Redis, Apache Kafka, GTest, Docker, Prometheus, Grafana.

EQUIFAX 03/2021 - 08/2022, 1.5 YEARS

- Contributed to the development of a C++ platform for secure processing of sensitive datasets using Intel SGX enclaves and encrypted service-to-service communication.
- Implemented secure data-exchange components using OpenSSL, gRPC, and Protobuf, reducing encrypted payload processing overhead by **21.4%** and mitigated a potential critical vulnerability.
- Implemented batch processing for database operations, reducing average processing time by **29.3%**.
- Supported an international market deployment with a multi-million-dollar NPV impact.

Technologies: C++17/11, STL, concurrency, Boost.Asio, Intel SGX, Intel SGX SDK, OpenSSL, gRPC, Protobuf, PostgreSQL, Redis, Docker, Kubernetes, CMake, GoogleTest, GitLab CI, Prometheus, Grafana, Linux, TensorFlow.

EDUCATION

HIGHER SCHOOL OF ECONOMICS, MOSCOW – MASTER, 2023 - 2025
Computational and Applied Mathematics

SOUTH URAL STATE UNIVERSITY, CHELYABINSK – BACHELOR, 2019 - 2023
Applied Mathematics and Informatics

OTHER ACHIEVEMENTS

Received diplomas twice at the Northern Eurasia ICPC
